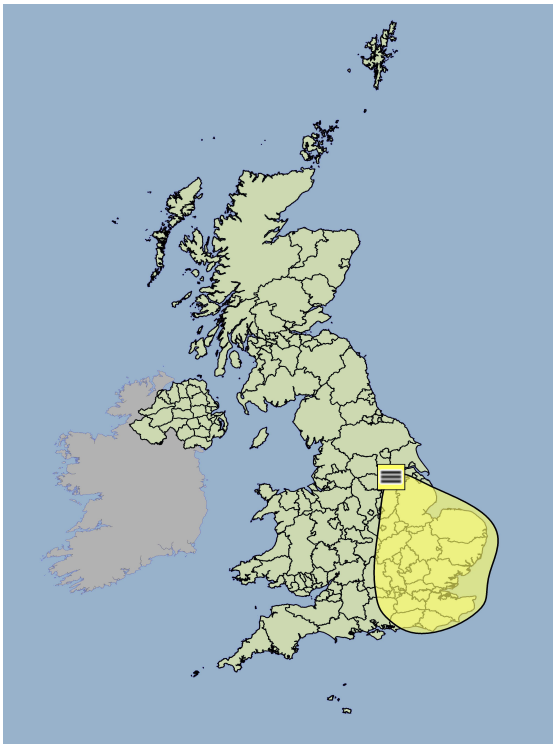
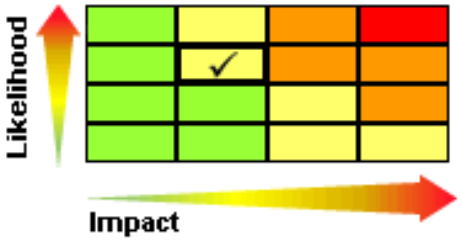
National Severe Weather Warning Service





Chief Forecasters Assessment
A stagnant, moist airmass covers many parts of the UK. Where skies were clear during the night, falling temperatures have led to the formation of fog, particularly across southeastern areas of the UK. This will slowly clear this morning.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **05:00 on Tue, 16th Sep 2014** until **09:30 on Tue, 16th Sep 2014**

Widespread fog is affecting much of East Anglia, Southeast England and the East Midlands this morning with visibility reduced to 100 metres or less in places. The public should be aware that this will lead to difficult traveling conditions during this morning's busy period. The fog should gradually lift and disperse during the morning.
